# MICRONIC
### INNOVATION IN SAMPLE STORAGE

## COMPLETE YOUR SAMPLE STORAGE WORKFLOW WITH COMPATIBLE SAMPLE MANAGEMENT SOFTWARE

Sample Management Software is the next step beyond the use of an Excel database. Micronic's unique 2D Data-Matrix codes are laser etched into the tube, replacing handwritten labels that can wear or fall off. All information about the sample, its origin and its physical condition is inseparable from the tube. The software and 2D Data-Matrix codes work together to enable scientists to easily track, trace and process samples.

Micronic Tracxer Code Readers are the link between your Sample Management Software and every individual sample. To make sure that the Micronic sample storage solution works with Sample Management Software we have extensively tested our readers with a wide range of Software Systems. See a selection of compatible Sample Management Software providers below.

*Ask your Sample Management Software provider for a demo with the Micronic Tracxer Code Reader!*

**1** COLLECT SAMPLES

**2** SEAL TUBES

**3** SCAN TUBE CODES

**4** ADD SAMPLES TO DATABASE

**5** STORE SAMPLES
